

CREMATION REMAINS CONTAINER SYSTEM AND METHOD OF  
MEMORIALIZING DECEASED WITH SAME

Abstract of the Disclosure

5 A method of memorializing a deceased comprises providing a  
common base, the base including a cremation remains compartment therein  
and being adapted to have secured thereto a figurine; providing a plurality of  
figurines, the figurines adapted to be interchangeably secured to the common  
base; selecting one figurine from the plurality of figurines for securement to the  
common base; securing the selected figurine to the common base; and placing  
10 cremation remains of the deceased in the cremation remains compartment of  
the common base. A cremation remains container system comprises a  
common base, the base including a cremation remains compartment therein  
and being adapted to have secured thereto a figurine; and a plurality of  
figurines, the plurality of figurines adapted to be interchangeably secured to  
15 the common base; whereby one can select one figurine from the plurality of  
figurines, secure the one figurine to the common base and place cremation  
remains of a deceased in the cremation remains compartment of the common  
base to memorialize the deceased.
